

INSTRUCTIONS FOR COLLECTION AND SUBMISSION OF SPECIMENS

FOR HIV-1 GENOTYPING

MICHIGAN DEPARTMENT OF COMMUNITY HEALTH

NOTE: HIV-1 genotyping is limited to use for patients infected with HIV-1, subtype B with a detectable viral load greater than 1000 copies/ml. The only patients for whom HIV-1 genotyping will be performed are those with evidence of either a first regimen failure, multiple regimen failures, or in pregnancy. A viral load test will be performed on all specimens submitted for genotyping. Genotyping will not be performed if the viral load is less than 1000 copies/ml.

SPECIMENS MUST BE LABELED WITH THE SAME NAME/UNIQUE IDENTIFIER AS SUPPLIED ON THE TEST REQUISITION

Genotyping “Plasma” Specimen Collection

1. Perform venipuncture using both 5.0 mL gel-separation tubes provided in the specimen collection unit.
2. Within two hours of collection, centrifuge gel-separation tubes.
3. Freeze both tubes @ - 20 degrees centigrade immediately after centrifugation.
4. Ship frozen specimens, **packed on dry ice**, to arrive during normal operating hours as stated below.
5. Wrap tubes in absorbent material provided and enclosed in plastic bag provided, place into aluminum/plastic screw-capped can (primary container) and secure cap with tape.
6. Wrap test requisition around the aluminum/plastic can and place into secondary container provided.
7. Tape all seams on corrugated box.
8. Place corrugated box into Styrofoam insulated overpack box and add dry ice. Seal box for shipment.
9. Complete the Dangerous Goods form provided, and attach all appropriate labels to the overpack box.
10. Ship by the fastest means available means, i.e., courier, U.S. Express Mail or FedEx.

The shipper is responsible for being sure that their package is in compliance with current regulations.

Specimens must be received during normal operating hours of 7:00 A.M.-3:00 P.M. Monday through Thursday to ensure timely processing.
